Word Press

WordPress is a free and open-source website creation platform and content management system (CMS) that allows users to create websites without having to write code. It was originally created as a blogging tool but has since evolved into a versatile CMS that can be used to create any type of website. WordPress is written in PHP and uses a MySQL or MariaDB database. It has features like plugins and themes that allow users to customize their websites. WordPress is an open-source software that has a large community of people collaborating on and contributing to this project.
